Overview

LPH25 high-pressure low-noise cage guided control valve is designed for reducing the noise. In order to adapt to the throttling proliferation and expansion of the gases, it has many symmetry holes on the sleeve to reduce the pressure drop. The compact valve body, having a S-shape flow passage that features low pressure loss and a stabilizer that regulates turbulent flow around the cage, allows a large flow capacity, rangeability, and high accuracy flow characteristics. The actuator integrated with simplest mechanisms utilizes a compact yet powerful diaphragm actuator loaded with multiple springs.

LPH25 valves are widely applicable for reliable control of high temperature, high pressure process lines.

Specifications

Nominal size	40,50,65,80,100,150,200mm 1 1/2, 2, 2 1/2, 3, 4, 6, 8 inch
Pressure rating	ANSI Class 900,1500,2500 JIS 63K
Connection	Flange:RF, RJ Flanged end:JIS B2201, ANSI B16.5 Weld:SW (40-80mm) , BW (80-200mm)
Body material	WCB,304,316,304L,316L,CE3MN
Core material	304,316,304L,316L,CE3MN

LPH25

High-pressure Low-noise Cage Guided Control Valve

Bonnet	Plain bonnet (-5~230℃) Extension bonnet Type 1 (230~566℃)
Packing / Grease	Grease not provided: When V shaped PTFE packing or PTFE yarn packing is used. Grease provided: When graphite packing is used.
Gasket	Type: Flat type, serrated type Material: Carbon steel (S15C), stainless steel (SUS316, SUS316L, SUS329J1), copper, aluminum, titanium, ASTM B574 (Hastelloy C-276 equivalent), or Alloy 20
Flow characteristics	Linear
Actuator	Pneumatic, electric: refer to the attachment.
Performance	Inherent range ability 50 : 1 ANSI B16.104-1976 III , Leakage less than 0.1% of maximum valve capacity. Hysteresis error: With positioner: 1% F.S. Linearity: With positioner: ± 1% F.S.

1. Column bordered with bold lines denote types provided with standard-type actuator.

2. The allowable differential pressure condition in the table is $\Delta P = P_1 (P_2 = 0)$ when it is closed, and the differential pressure changes slightly as outlet pressure P_2 .

3. Take care not to cause the maximum allowable differential pressure to exceed the maximum operating pressure designated by ANSI B 16. 34orJIS B2201

4. Inlet pressure P_1 is not allowed to exceed the maximum permissible differential pressure when the valve is closed.

5. The upper figures denote the operating allowable differential pressure. The lower denote allowable differential pressure at full closure.

			26.4	26.4	
ANSI 2500			19.2	25.5	31.9
			44	44	44

1. If the actuator has auxiliary air supply, a smaller one of the two supply gas pressures should be chose to calculate the allowable differential pressure.
2. The allowable differential pressure condition in the table is $\Delta P = P_1 (P_2 = 0)$ when it is closed, and the differential pressure changes slightly as outlet pressure P_2 .
3. Take care not to cause the maximum allowable differential pressure to exceed the maximum operating pressure designated by ANSI B 16.34-1981 or JIS B2201
4. Inlet pressure P_1 is not allowed to exceed the maximum permissible differential pressure when the valve is closed.
5. The upper figures denote the operating allowable differential pressure. The lower denote allowable differential pressure at full closure.
